A Guide to Vocational Assessment — Third Edition

Paul W. Power

A Guide to Vocational Assessment is designed to provide an explanation of the varied approaches of vocational assessment, as applied to a wide variety of clients who have physical or mental disabilities. In addition to offering basic information for those who will assist clients in the rehabilitation process, this text provides up-to-date information to those who have been working with clients for many years.

This third edition includes case studies, focuses more attention on those individuals representing varied ethnic backgrounds, addresses the role of environment in assessment,

and discusses varied learning styles. It reexamines the definition of disability from the perspective of current policy and illustrates how measurement needs and demands emerge from this redefinition. Each chapter has been rewritten to update available assessment materials. The book also provides a "how to" approach to the fundamental areas within vocational assessment, as well as a unique assessment model for vocational evaluation.
